PERFECT YOUR LATTE ART

FLOWTIP VS TRADITIONAL JUG

The FlowTip Jug is designed with a sharp tip, a precise tangent, and a smooth neck for better control. Its ergonomic shape and heat-resistant build make it safer and easier to use, while traditional milk jugs lack these key features.

HOW TO USE

Gas Stovetop:

Use the lowest setting to prevent direct flame contact with the handle.

Electric Stovetop:

Position the jug slightly off-center to avoid overheating the handle. Be cautious, as abrasive stovetops may scratch the jug.

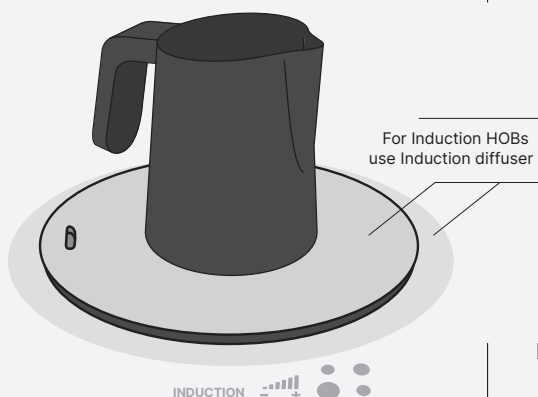

Induction Stovetop:

Requires an induction diffuser for compatibility.

Note: Do not heat a second batch without cleaning the jug to prevent burning. Always heat milk on the lowest setting (approx. 2 min) to reach 55–65°C.

CLEANING

- Rinse or soak the jug immediately after use for easy cleaning.
- Use a cleaning brush for stubborn milk residue, milk jug cleaners, or soak in a baking soda and lemon juice mixture.

COMPATIBILITY

- Works with gas and electric stovetops.
- Induction stoves require an induction diffuser.
- Not microwave safe.

HANDLING THE RUBBER SLEEVE

Ensure the rubber sleeve is properly positioned by pushing it down slightly at the base to match the jug's shape.

This prevents slipping and ensures safer handling.

PACKAGE CONTENTS

- One Black Coated / Handleless / White Handleless FlowTip Jug
- One Certificate of Authenticity
- Access code for Latte Art Master Class
